

TIXstream MFT is TIXEL's high performance solution for corporate wide file exchange while TIXstream FX provides a file exchange platform for users and partners connected via the internet.

Both solutions combined build a perfect ecosystem for growing demands in today's distributed media workflows. Large media production organizations rely on this combination to accelerate and simplify

file exchange in heterogenous multi-vendor environments.

Flexible and customizable meta data handling, relay transfers, notifications, and much more provide a fully optimized and traceable end-to-end transfer chain - built upon TIXEL's rock-solid transfer engine for maximum performance within various storage and network environments.

| <p>Light-weight REST API to interface with various 3rd party systems (MAM, CMS, etc.)</p> | <p>Easy-to-use browser-based asset exchange with internal and external partners via the Internet</p> | <p>TIXEL's proven transfer engine enables maximum transfer speed under any network conditions</p> |

WHAT IT DOES

TIXstream MFT/FX covers the entire range of file-based workflow requirements - internal and external. It scales perfectly with growing demands and evolving workflows.

- Regular *and* spontaneous file exchange in-house, and with external partners, branch offices, etc.
- Robust, **decentralized** job and queue management at both transfer end points
- Controlled via clear, **easy-to-use** web GUI and/or by today's and tomorrow's **workflow** tools
- Built for **most flexible** integration - ideal for diverse, heterogeneous environments and workflows
- MFT Works with DAS, NAS, SAN via FS, CIFS, (S)FTP
- **Secure** single- and multi-destination file transfers with maximum **speed** on all kinds of networks

HOW IT WORKS

TIXstream MFT combines TIXEL's **transfer engine** for high-performance file exchange with light-weight, yet comprehensive transfer **job management**, standard **REST interface** for control, monitoring and notifications. MFT's service architecture allows easy integration and **customization** for individual requirements.

Coupled with TIXstream FX, MFT enables **Internet** file exchange - direct, fast, secure, and easy-to-use.

- Direct interaction with 3rd party MAM and CMS
- Alternative stand-alone operation with intuitive Web-GUI for transfer job creation and management
- Customizable, transparent meta-data handling
- Clients run on Windows, macOS, and Linux
